Hand-Drawn Comic:

This semester we will be studying digital technology and culture through the lens of comics and graphic novels, using the book "Understanding Comics: The Invisible Art" by Scott McCloud as our core text (buy it at the Bookie or order online now!). Historically, comics have allowed for a great deal of experimentation and innovation: We will learn from the history and diversity of comics as an art form as we begin to examine how our ever-changing digital tools affect our creative production and our options for communication. But for now, go back to the basics. Draw a short comic strip by hand, using paper and whatever drawing tools you prefer or find handy. Think of this comic strip as an introduction of yourself to your classmates and your teacher. We will share these comics in class.
